Bài 3:

```
Class Nguoi {
        String hoDem, ten;
        String ngaySinh;
    public Nguoi( String HoDem, String Ten,
String Ngay Sinh ){
        This.hoDem = hoDem;
        This ten = ten;
        This.ngaySinh = ngaySinh;
    }

    void xuat (){
        System.out.println (hoDem +" " +ten
+ " - " + NgaySinh);
    }
}

    Class SinhVien extends Nguoi {
        String ma SV;
        double diemTB;
    public SinhVien (String HoDem, String ten,
String ns, String masv, double diemTB) {
        super (hoDem, ten, ns);
        this.maSV = masv;
        this.diemTB = diemTB;
    }

    void xuat () {
        super.xuat ();
        System.out.println(" MaSV:" + maSV +
" - DTB:" + diemTB);
    }
}.

    public class Main {
        public static void main( String [] args)
{
        SinhVien sv = new SinhVien (
            "Nguyen Van ", "A", "01/01/2006",
"SV01", 8.5);
    }
}.
```
